

Curriculum Vitae

Personal Information

Name **Mark Lindhout**

Birthday February 28th, 1980

Phone number +49 160 97 08 21 23

E-mail address moin@marklindhout.com

Postal address
Feldstraße 10
24768 Rendsburg
Germany

Website: <https://marklindhout.com/>

Core Skills

DevOps, Software Development, Continuous Integration, CI, Continuous Delivery, CD, Linux, Bash, Ansible, Docker, GitLab, WordPress, PHP, JavaScript, Node.js, Vue.js, HTML, CSS, Front End Development, Git

Languages

NL, Nederlands Native speaker
EN, English Fluent
DE, Deutsch Very good

Education

1997 CLV High school (HAVO), Veenendaal
2001 *Multimedia Design & Technology* Minor (Propedeuse), Enschede
2006 *AKI: Acad. v. Beeldende Kunst en Vormgeving* Bachelor's degree (HBO), Enschede

Professional History

Senior Software-Developer and Dev-Ops Consultant

Phoenix Contact

Blomberg, remote (2021, 6 Months)

At Phoenix Contact I develop, maintain, and run a Django web application. I develop the front-end using Vue.js, Parcel, SCSS, NPM, Node.js, and various flavors of modern ECMA-Script, and develop parts of the back-end using Python, Django, which runs on a Linux server using Apache and Docker. This all is tested, deployed, and connected using GitLab, GitLab CI, and a helping of Ansible.

Django , Ansible , Python , Linux , CD , CI , Node.js , Vue.js , GitLab , GitLab CI , Docker , Python .

Senior Software-Developer and Consultant

Europace AG

Berlin, remote (2020 & 2021, 9 Months)

I returned to Europace to help out a small team in developing a Node.js-based cloud application. Working with all kinds of AWS services, GitHub and all its many features, and using a modern, Typescript-based stack with CDK for cloud deployments.

Linux , CD , CI , Node.js , JavaScript , Typescript , CDK , GitHub , GitHub Actions , AWS , Lambda , Cloudformation , Cloudwatch , DynamoDB , S3 , CDK , Docker .

Senior Software-Developer, DevOps-Engineer

Agency Software

Berlin, remote (2019 & 2020, 6 months)

For this project, I set up a complete Sails.js web application from scratch, including data imports, installation, and deployments. I built DevOps tooling to reliably deploy and install the application, as well as provision the servers it is running on. The application bases on Node.js and *Sails.js*. I worked on the API-based web application, used for warehouse and order management at large distributors.

Ansible , Linux , Server Admin , Ubuntu , Hetzner Cloud , CI , CD , Node.js , JavaScript , Sails.js , GIT , GitHub , Docker .

DevOps Engineer, DevOps Consultant

Europace AG

Berlin (2019, 6 months)

In this project at *Europace*, I work with the Solutions-team to improve the setup and roll-out of their Java-based micro-services. I help them optimize and improve their build- and deployment-workflow, and to make their service delivery more robust and reliable.

GitLab , CI , CD , AWS , S3 , EC2 , ELB , Cloudfront , ElasticSearch , Docker , Docker Swarm , Ansible , Python , Linux , Vagrant , Shell , Virtualbox , Rocket , Kubernetes , LXD , LXC .

DevOps Consultant, Build-Pipeline Hero

Europace AG

Berlin (2019, 3 months)

At *Europace* I work with the local build-pipeline heroes to improve, optimize, and modularize their CI-pipelines. I help implement Gitflow as a development strategy, and collect and spread knowledge about development, best practices, optimization, and other CI-related subjects.

Continuous Integration , CI , CD , Teamcity , Git , Bash , XML , Maven , Linux , AWS , S3 , EC2 .

Senior Software Developer, Node.js, Front-End

Bundesdruckerei

Berlin (2018, 4 months)

At the *Bundesdruckerei* I developed several user interfaces for Smart-card applications. I use various industry standard processes for the creation of specifications, wire-frames, and the first round of user experience design. The applications I worked on are implemented with common front-end technologies.

Re-usable, clean code was an important aspect of this project, and one of the requirements is to avoid using frameworks. This keeps technical debt low while maintaining high software quality.

Object-Oriented Vanilla JavaScript , ES5 , ES6 , Node.js , WebSockets , Browser Extensions , Python , Bash , GIT , GitLab , SSL , FFMPEG , Video Encoding , Video Transcoding , Wireframing , UI Design , UX Design .

Senior Software Developer, JavaScript, Node.JS

Nowtilus GmbH

Berlin (2018, 5 months)

I've aided the very small team in the development of the *Nemo Bridge* application, deployment workflows, and the implementation of a continuous integration and continuous delivery setup.

I've done a great deal of server management and IT automation with Ansible here, and severely cleaned up, and stabilized the *Nemo Bridge* runtime, which is used to manage media-, metadata- and transcoding-services that deliver live TV streams, video-on-demand and video advertisements.

Ansible, Node.js, REST APIs, AWS, S3, EC2, Cloudfront, RDS, DocumentDB, SSH, Git, Linux, FFMpeg, GPAC, MP4Box, Python, JSON, XML.

Senior Software Developer, JavaScript, Front-End

Aklamio

Berlin (2016, 1 year, 3 month)

I've developed the core JavaScript libraries for *Aklamio*'s referral portals. These libraries communicate with in-house Ruby APIs, and offers advertisers the capabilities to handle user registration, do *Aklamio* account logins, and to generate user-to-user recommendations. At *Aklamio* I have also developed the *Cashbar* browser extension for Chrome and Firefox browsers. This extension allows recommendations, logins, and account registration from within your web browser.

JavaScript, ES3, ES5, ES6, Node.js, Ansible, Varnish, NginX, GIT, GitLab, AWS (S3, EC2, ELB), PHP, Wordpress, Symfony, Vagrant, Ubuntu, Debian, SSH, Gulp, Browser extensions, WebExtensions API.

Senior Software Developer, Front-End

Publicis Pixelpark

Berlin (2016, 3 months)

At *Pixelpark* I work on front-end projects within a team of designers, back-end developers and quality assurance engineers.

GIT , GitLab , Bash , Debian , Virtualbox , Vagrant , Javascript , jQuery , Node.js , Gulp , PostCSS , CSS3 , HTML5 .

Consultant, Web Performance Optimization

Aklamio

Berlin (2016, 1 month)

For *Aklamio*, I analyzed their web stack and reported on issues pertaining to their server performance. I offered overviews of bottlenecks and reported practical performance solutions for Varnish Cache and NginX, but also for improved JavaScript performance in *Aklamio*'s widely-used social widget. A combination of improved cache configuration, better web stack performance and improvements to client-side code greatly extends the lifetime of the application as well as the hardware it's running on. It saves cost, bandwidth, power, and reduce client-side requirements.

Ansible , Varnish , NginX , Siege , AB , NC , GIT , GitLab , Bash , Python , Ubuntu , Debian , Vagrant

DevOps Engineer, WordPress

Sparkassen-Finanzportal GmbH

Berlin (2016, 4 months)

At SFP I work on creating, testing and maintaining the developer workflow for WordPress web applications. This workflow is comprised of Ansible and relevant shell scripts, and run on a Jenkins continuous integration server that handles provisioning of web and mail servers, load balancers, and monitoring servers, and takes care of the deployment of WordPress. The workflow assures maintained server integrity (system updates and security patches) and implements access control lists (ACL), caching, load balancing, monitoring, dependency management, and many more.

Ansible , Varnish , NginX , Node.JS , Munin , AWS , WordPress , PHP , GIT , Bash , YAML , Ubuntu , Debian , Virtualbox , Vagrant .

Senior Software Developer, WordPress Plug-Ins

Sparkassen-Finanzportal GmbH

Berlin (2016, 3 months)

At the *Sparkassen-Finanzportal* I developed several WordPress plug-ins that are actively being used on their Intranet. These plug-ins hooked into a SOAP web service and performed various verification actions to ensure high data quality. A special focus in these projects was digital security and data protection.

WordPress , PHP , GIT , Bash , Javascript , jQuery , Node.js , Grunt.js , LESS , CSS3 , HTML5 .

Senior Software Developer, WordPress, Front-End

Raisin GmbH

Berlin (2014-2015, 1 year and 6 months)

At *Raisin* I've worked as a freelance front-end developer. Initially, I set up the entire website (based on WordPress) and accompanying IT-infrastructure. Later on, I worked as part of the front-end development team and consulted the developers, IT-department and product owners in larger projects. I set up coding standards, version control, developer machines, web server and caching server configuration. I developed a theme framework for the deployment of all the company's international web sites which greatly improved development speed, code stability and clarity.

WordPress , PHP , GIT , GitLab , Linux , NGINX , Bash , YAML , Virtualbox , Vagrant , Puppet , Ansible , Javascript , jQuery , Node.js , Grunt.js , LESS , HTML5 , CSS3 .

Senior Software Developer, Front-End

ImmobilienScout24

Berlin (2013-2014, 1 year and 3 months)

Freelance, part of the front-end team at *ImmobilienScout24*. I helped this department to improve their workflow by introducing front-end build systems to improve productivity and reduce errors. I set up a build-chain focusing on optimization and cross-platform compatibility. Closely worked with designers, product owners and back-end developers in implementing a new responsive design for the B2B back-end of the web site. In my time at *ImmobilienScout24* the front-end team developed a CSS framework for quick and easy creation of *ImmobilienScout24*-themed prototypes.

Javascript , jQuery , YUI3 , Node.js , Grunt.js , LESS , HTML5 , CSS3 , PHP , SVN , GIT , Jira .

Software Developer, Front-End

JustBook

Berlin (2013, 2 months)

As a freelancer at *JustBook*, I developed against their Python-driven platform. This was already providing the mobile apps, and I made the desktop web application a reality.

Javascript , jQuery , HTML5 , CSS3 , Modernizr , Django Templating , GIT .

Software Developer, Front-End

ANWB

Den Haag (2012, 1 month)

As a freelancer at the *ANWB*, I worked on various parts and various applications for the high-traffic *ANWB* website. Here I worked with PHP, Varnish, CSS, HTML5 and Javascript. Focus was on the development of rich HTML5 web pages with jQuery on the Front-End and Hippo 7 as a CMS.

CSS3 , HTML5 , jQuery , Modernizr , Javascript , PHP , GIT .

Software Developer, Front-End

Tam Tam

Rijswijk (2012, 2 months)

As a freelancer at *Tam Tam*, I worked on a web applications that serves as a market-place for private contractors in the construction field. I developed prototypes and final Front-End code according to the principle of progressive enhancement with a responsive design for iPad, iPhone and Android platforms.

PHP , Less , CSS2 , CSS3 , HTML5 , jQuery , Modernizr , GIT .

Software Developer, Front-End

Cendris

Den Haag (2011-2012, 3 months)

As a freelancer at *Cendris* (part of *PostNL*) I worked as a Front-End developer on various web applications. I created the visual identity, did the web design, and coded the Drupal 6 themes for these web apps. The themes were adjusted to work well on desktops as well as on smart mobile devices such as iPhone, iPad and Android tablets and phones.

PHP , Javascript , jQuery , Modernizr , HTML4/5 , CSS2/3 , Interface Design , CVS .

Software Developer, Front-End

Cobeco Pharma

Rotterdam (2011, 6 months)

My work as a freelancer here entailed the building, designing and management of two websites. One was the company's corporate site, and the other was their e-commerce solution. I took care of the complete implementation, including theming, analytics, email campaigns and online marketing.

PHP , WordPress , Linux Server Admin , Bash , Email , MailChimp , jQuery , Modernizr , Javascript , CSS2-3 , HTML5 , SVN .

Front-End Developer, Designer

Trancon

Nieuw-Vennep (2010, 8 months)

Trancon build e-commerce and logistic management software (WMS). At *Trancon* I filled the position of all-round designer for print, web, interface and user experience. I re-imagined *Trancon's* corporate identity, providing them with everything from a new logo to presentation templates. I also worked on the marketing of the two flagship products, both through email and online. I converted their two main product sites to WordPress, from installing and configuring the server to the template realization and Front-End optimization and cross-browser compatibility. The themes were optimized to work with desktops as well as tablets like the iPad.

PHP , WordPress , CSS , HTML , jQuery , Javascript , Linux Server Admin , Bash , SVN , Team Foundation Server .

Concept, Design, Code, Sysadmin

Het Webambacht

Rotterdam (2010-2013)

Het Webambacht is a collective of freelancers from the Netherlands. I fill the role of concept developer, designer and coder; a sort of all-round Front-End developer and designer with a healthy dose of system administration. Here, I take care of the complete package; from strategy development to design, from development to actual hosting. I work together with professionals in copywriting, illustration, photography, video production and on-line marketing to complete my skills.

Front-End Development , JavaScript , ECMA-Script , ES3 , ES5 , HTML , CSS , PHP , Python , Bash .

Front-End Developer, Designer

Madcap

Hardinxveld (2009, 6 months)

This company develops sites on the Drupal platform. My role here was the development of themes and templates for Drupal 5 and 6 and consulting for usability and interface design.

Drupal , PHP , CSS , HTML , jQuery , Modernizr , JavaScript , SVN , Bash .

Front-End Developer, Owner

M.P. Lindhout

The Netherlands (2001-2013)

I'm a freelance Front-End developer and designer with a love for good typography and free software. Over the years I've done everything that has to do with the web; managing content, installation of servers and everything in between. More recently I've focused on the technical aspects of running web sites such as hosting, back-end code and server administration.

Front-End Development , JavaScript , ECMA-Script , ES3 , ES5 , HTML , CSS , PHP , Python , Bash .

Web Designer

E-touch

Zaltbommel (2000)

Design of various web sites for a wide range of clients. My work consisted of the implementation of a design into front end code. The main focus here was compatibility across all main browsers, javascript development, and the production of standards-compliant HTML.

Front-End-Development , HTML , CSS , JavaScript , Windows , Adobe Photoshop

Web Designer

G20

Lienden (1999)

At G20 I designed and coded websites, most of them static. I used my skills in the fields of HTML, Javascript and CSS to build cross-browser compatible web sites — Internet Explorer 4, anyone?

Front-End-Development , HTML , CSS , JavaScript , Adobe Photoshop
